HOW DOES OUR  
COMPANY IMPROVE ITS  
IMPACT ON THE  
ECOLOGICAL  
ENVIRONMENT?

# CliniSciences Group

## How can CliniSciences limit its impact on the environment?

It is unfortunately, impossible to avoid environmental degradation completely, but it is possible to try to limit impacts to the absolute minimum. To do this, a company must first identify its environmental impacts and then consider how best to manage them.

## STRATEGY TO REDUCE THE ECOLOGICAL IMPACT IN CLINISCIENCES

In the professional context, **ClinScience** proposes to all personnel, clients, and suppliers to limit and reduce their environmental impact on a daily basis in order to improve their social/work environment. Indeed, everyone can easily adopt an **eco-responsible** behaviour in the workplace. In this sense, here are six simple actions to easily reduce your impact and its effects on the planet.

- 1 Reduction of electricity consumption via power strips that cut off power to workstations at night and at weekends
- 2 Reducing heating consumption and LED lighting
- 3 No cumulus of water but micro heating stations activated only when in use
- 4 carton recycling
- 5 Cushioning chips biodegradable in the presence of micro-organisms
- 6 Rationalisation of the carbon impact of our deliveries via Ciblex, which invests 1/3 of its fleet with electric vehicles and adopts snail-like routes to limit the carbon footprint

## The environmental strategy being achieved?

The CLINISCIENCES GROUP recognises that it has a responsibility to the environment by complying with legal and regulatory requirements and implementing this environmental policy, therefore employees have a responsibility, within their own area, to ensure that the objectives of this policy are achieved.

## Policy objectives

- Comply with all relevant regulatory requirements.
- Continuously improve our environmental performance.
- Continually improve and reduce environmental impacts.
- Integrate environmental factors into business decisions.
- Increase employee awareness and
